19.2V LOW NOISE TEMPERATURE COMPENSATED ZENER REFERENCE DIODE

FEATURES

- Available as "HR" (high reliability) screened per MIL-PRF-19500, JANTX level. Add "HR" suffix to base part number.
- Available as non-RoHS (Sn/Pb plating), standard, and as RoHS by adding "-PBF" suffix.

MAXIMUM RATINGS

Characteristics	Values
Junction and storage temperatures	-65 to +175°C
DC power dissipation	500mW @ 50°C
Power derating	4 mW/°C above 50°C

Note 1. Nominal voltage for all types is 19.2 volts $\pm 5\%$

Note 2. Referred to as the "box" measurement method, the ΔV_{ZT} is the maximum voltage variance that will occur as the voltage is scanned through all temperatures between the temperature range limits.

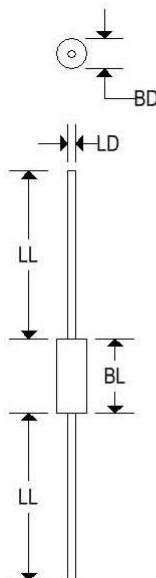

Note 3. The effective temperature coefficients are tabulated in $\%/\text{ }^\circ\text{C}$ primarily for information only because temperature compensated diodes inherently have a non-linear voltage temperature relationship.

Note 4. The dynamic zener impedance Z_{ZT} is derived from the resulting ac voltage developed when a 60Hz, rms, ac current equal to 10% of the dc zener current I_{ZT} is superimposed on I_{ZT} .

Note 5. To specify radiation hardened devices, use "RH" prefix instead of "1N".
